Sunday Store

Goal: launch a small online store. Users: customers and store administrators.

Deliverable: responsive web app. Constraint: use the client's selected payment provider.

Requirements and boundaries

R1. Customers must sign in with email and password before checkout. Guest checkout is excluded.

R2. The catalogue must support keyword search and category filters.

R3. Signed-in customers must see their own order history, never another customer's orders.

R4. Payments must use the payment provider selected by the client.

R5. Administrators must update product prices and availability.

R6. Customers must receive an email confirmation after a successful order.

R7. Native mobile applications, CSV exports and inventory integrations are excluded.

Acceptance and revision policy

Acceptance: a customer signs in, searches, completes checkout and views their own order. An administrator changes a price. Core pages work on mobile.

One approved new-scope revision round is included. Related requests share a round. Corrections to this agreement are free. Additional rounds cost INR 500 only after client consent and reviewer approval.

Client labels R1-R7 aid review; ScopeSathi assigns its own requirement IDs. This brief contains no later change requests or test instructions.
